

- Do you know, at a glance, the preventive, screening and disease management services due for each of your patients?
- Are you participating in a pay-for-performance program but struggle to report on your care delivery?
- Are you implementing a medical home and need an underlying technology solution?
- Are you looking for an EHR that's quality-focused?

Team-Driven Quality Improvement

Effectively manage and improve the quality of care provided to entire patient populations with Cielo Clinic. Providers and administrators turn to Cielo Clinic's set of proactive clinical tools to:

- assist with the identification of gaps in care,
- support care management programs,
- e-prescribe,
- proactively manage and report on pay-for-performance programs,
- support the care delivery elements in a patient-centered medical home,
- create a longitudinal, quality-focused electronic health record

Practices with electronic medical record (EMR) solutions utilize Cielo Clinic to enhance their investment with quality management features. Practices without an EMR utilize Cielo Clinic as their medical record technology.

Cielo Clinic's focus on coded clinical data is important for managing the care of all patients and for accurately detailing performance for payor programs such as pay-for-performance. Most practices either don't effectively track clinical data, or if they do, it is a time-consuming, manual audit process.

Effective Care for Chronic Disease Patients

Cielo Clinic helps ensure efficient, high-quality care for all patients through point-of-care reminders of services for which patients are due. Patients that may not be scheduled for an office visit but are due for services can be reached through system-generated call lists, customized patient letters and secure electronic emails.

Proactive Care Management

Practices use Cielo Clinic to monitor patient participation in care management programs, highlight areas of concern and ensure communication is maintained.

Full E-Prescribing

Cielo Clinic offers full e-prescribing functionality within its system, allowing providers to seamlessly prescribe and utilize Cielo's clinical data during the prescription writing process.

Accurate and Detailed Reporting on Care Performance

Cielo Clinic offers capabilities to not just report on performance, but also provides actionable data to improve performance - analyze quality measures across diagnoses & patient demographics, aggregate data at a variety of levels; provider, team, site, practice or group and build detailed reports for managing quality improvement programs.

How does Cielo Clinic Enhance an EMR System?

Electronic Medical Records (EMR) systems optimize billing data, but billing information does not give a complete picture of patient diagnoses, nor does it accurately reflect the provider's care performance. Cielo Clinic uses clinician-verified problem and reminder lists to capture coded clinical data with accuracy superior to using billing data alone.

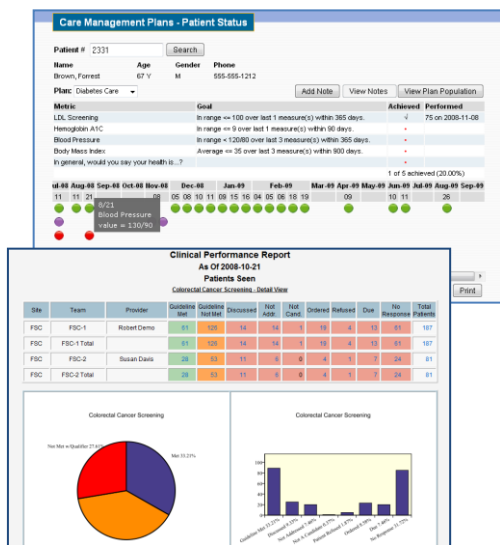

The Clinician's Choice

Cielo Clinic is utilized in a wide range of health care delivery settings and is used by health systems and physicians organizations of all sizes. It has become a "must-have" tool for any clinical quality improvement program.

Cielo Clinic has a quick and demonstrable return on investment. Proactive care reminders bring patients into practices for visits and evidence-based services that generate additional billable income. Clinical data reporting supports more accurate outcomes for payor quality programs like pay-for-performance. Automated quality reporting greatly reduces the cost of quality audits and minimizes the need for chart pulls.

Pricing

Product pricing is based on a low annual subscription cost that includes support and maintenance.

Cielo Clinic Features Overview

- ✦ Produces customizable Encounter Forms for each patient's visit to remind providers about services due, document diagnoses and problems, and record actions taken.
- ✦ Delivers on-demand, multi-problem registries by dynamically identifying patients across a single or any combination of chronic disease categories, acute conditions, and even lifestyle diagnoses.
- ✦ Proactively reminds patients of necessary services for which they are due by generating patient reminder letters, call lists or secure electronic mail messages.
- ✦ Tracks patient participation in care management programs, generates program-specific assessments.
- ✦ Produces population reports to manage care for all patients; those being seen and those not being seen.
- ✦ Electronically prescribes and captures medication lists.
- ✦ Tracks physician and group practice performance on clinical and quality performance measures.
- ✦ Accurately reports clinical performance measurements using clinician-verified problem lists which give a more accurate picture of physician performance than billing data alone.
- ✦ Electronically submits to pay-for-performance programs like PQRI.
- ✦ Fits into existing paper-based or electronic workflows.
- ✦ Integrates with other clinical systems, including EMRs, to extend and preserve existing technology investments.
- ✦ Installs quickly and easily as a web-based product.
